Customer community page: Visit your [customer community page](#) to find information on the latest release and other helpful resources. Be sure to check out the upcoming webinars and previously recorded, on-demand webcasts that you may have missed too.

User community: As a [user community](#) member, you can network with other users, participate in discussions about topics related to your specific solution and industry, find out about upcoming events, and share best practices, tips, tricks, and tools.

Give customers what they need and want

To be competitive, process manufacturers have to develop new products quickly, produce them using the best possible formula, and maintain full compliance with all regulatory requirements. It's a unique set of requirements that demands a tailored approach to product lifecycle management, and Infor Optiva can help.

By streamlining your most complicated processes, you can develop, launch, and manage better products as much as 90% faster. Infor Optiva is helping companies accelerate their product development, minimize cost of production, and ensure 100% regulatory compliance. Your company can become more agile and turn today's escalating customer expectations into a competitive edge.

Infor Optiva can help you:

Improve
quality

Boost
productivity

Maximize
profits

Predictive analytics: turning data into insights

Like most leading manufacturers, your company is likely swimming in data that needs to be consumed quickly. Turning this data into insights you can actually use is crucial to future success. Early insights can help manufacturers improve day-to-day operations, but it can also help to future-proof their organization.

Modern, advanced analytics integrated with modern ERP solutions can really help manufacturers predict needs and derive meaningful insight from trends—past and future. Advanced analytics are the key to making smart, informed decisions, and Infor can help you leverage your data to the fullest.

Start now to transform information into actionable insights and make data a competitive advantage. Read “10 ways to make analytics more useful and consumable” for both [Food and Beverage](#) and [Chemicals](#) manufacturers. These papers offer both tactics and benefits that can help you view your business from all angles, keeping your strategic decision-making on the right course.

The recipe for success

Three major trends are shaping the food and beverage industry. And they all add up to significant challenges: tight regulations, the push to create fresher, more natural foods, and slim margins.

What are the consequences if manufacturers don't keep pace? What if there was a way to become more compliant, innovative, and cost efficient at the same time?

Download our [infographic](#) to see how these three major trends are shaping the food and beverage industry and how the right technology is the recipe for success.

Food and beverage production: Three big trends, three big challenges
